

Professional Summary

Professional Engineer (P.E.) and Reliability Coordinator with 6 years of experience in Power System in Operation, Planning, Resource Integration, Modeling, Steady State and Dynamic Analysis at ERCOT ISO and LCRA TDSP.

Master of Engineering from Lamar University Major in Power Electrical and Computer Engineering.

Currently pursuing a Master of Science in Artificial Intelligence at University of Texas at Austin. AWS/IBM Certified.

Proficient in PSS/E, GE EMS SCADA/TSM/DTS, ABB MMS, Python (Pandas, NumPy, Matplotlib, Scikit-learn, Pytorch)

Work History

LCRA TSP Transmission Planning Model and Assessment Engineer (3/2024 – Present)

- Review and approve Planned, For - Construction and Operational ratings for LCRA transmission lines and auto transformers and shunts resulting from substations, lines and auto transformers additions or upgrades in capital projects.
- Ensure system reliability, and compliance with NERC Standards, ERCOT Operation and Planning Guides.
- Maintain LCRA Planning Network Model in ERCOT according to capital projects in a timely manner.
- Participate in ERCOT SSWG, DWG, PLWG, RPG, LFLTF working groups.
- Submits PMCR, DCP on ERCOT MOD for model changes and tuning.
- Propose and sponsor projects based on load forecast, generation and transmission capacity and budget.
- Perform Steady State Analysis for new Generation and Load Interconnect Requests.
- Perform Dynamic Stability Analysis for MOD-26, MOD-27, and Model Quality Test.
- Enhanced model accuracy through data comparisons and validity checks.

LCRA TSP Transmission Operation Network Model and EMS Engineer (8/2022 – 3/2024)

- Maintain LCRA Operation Network Model in ERCOT and LCRA EMS Model according to capital projects.
- Draft One Line Diagram for before and after network model changes for new substation, line, transformer additions.
- Submit NOMCR and DPC to ERCOT for Network model changes and participate in ERCOT NDSWG working groups.
- Address real-time issues for SCADA and Transmission Security Management (TSM) applications, State Estimator
- Maintain Dispatcher Training Simulator (DTS) system network model, data base and applications.
- Maintain PMU data in Ecdc and RTDMS server and client access manager.
- Update Line ratings and Impedances in EROT model and EMS based on Engineering team publications.
- Participate in network data working groups with ERCOT Collaborate with customers like PEC, BBEC, BEC, SBEC.

ERCOT ISO Real Time Power System Engineer (CROSSTRaining) (1/2022-4/2022)

- Provided engineering support to ERCOT Control Room System Operators through Power Flow studies, Stability Assessments, and system applications support.
- Maintained Real-Time ERCOT State Estimator, Contingency Analysis, and Voltage/Transient Stability Analysis tools.
- Developed Constraint Management Plans such as TOAP based on engineering studies for grid vulnerabilities.
- Identified network model and applications quality issues.
- Collaborated with ERCOT System Operators and Market Participants to maintain grid reliability and security.

- Troubleshoot situational awareness tools and reported grid status and developments to ERCOT departments.

ERCOT ISO Operation Training Instructor (Full time) (10/2020-8/2022)

- Developed power system simulation training scenarios to enhance ERCOT system operators' performance.
- Maintained EMS, MMS, and OTS systems, troubleshooted simulator issues.
- Evaluated operator responses during simulation training such as EEA, Black Start, RTA, IROL, Hurricane Drill, Low Inertia.
- Participated as a RC, QSE or TO in real time simulations.
- Prepared presentations for operation engineer and system operators like RTA presentation.

ERCOT ISO Power Electrical Engineer (ERCOT – SOAL technologies) (10/2019 to 10/2020)

- Performed RARF registration and Reactive testing.
- Reviewed and processed generation interconnection and full interconnection study (FIS) applications.
- Reviewed QSA Full Interconnection Studies such as Short Circuit, Faciality, Steady State, Stability Studies.
- Utilized EMS and PSS/E Transmission Planning load flow cases for power system analysis.

HISD Associate Teacher (2/2019 - 3/2022)

- Teach math and physics, manage the classroom and follow the lesson plan.

CFISD Substitute Teacher (4/2018-1/2019)

- Teach various subjects substituting for absent teachers.

Education

The University of Texas at Austin (8/2024 – Present)

- Master of Science in Artificial Intelligence – GPA 4.0

Courses: Deep Learning, Machine Learning, Optimization, EAI, AIH

Projects:

- Built a vision system and autonomous racing agent for SuperTuxKart, optimizing performance through advanced deep learning techniques.
- Applied machine learning algorithms to real-world data sets, solving problems in pattern recognition and dimensionality reduction.
- Developed ethical AI guidelines for system design, incorporating fairness and transparency into decision-making frameworks.

Lamar University (1/21/2019 to 5/12/2020)

- Master of Engineering in Electrical and Computer Engineering – GPA: 3.8
- Courses: Power System Motor & protection, Introduction to Robotics, Power Sys Stability & Control, Programmable Logic Controller, Computer Network I & II, Low Power CMOS Des & Rel, Cyber Physical Sys & Security, Instrumentation System and Auto.

Shahid Beheshti University (7/2017)

- Bachelor of Science in Electrical and Computer Engineering
- Courses: Protection and Relays, Power System I & II and labs, Electrical Machines I, II, III, Especial Machines and labs, Computer Architecture, Computer Programming, Linear Algebra, Electromagnetic, Industrial Drawing, System Analysis, Logical Circuits, Electronics 1 & 2, Telecommunications, Production and Power Station, High Pressure Plant Design and Project, Mathematics I, II and physics, Differential Equations, Statistics and Probability Engineering.

AI & Automation Projects (Self-Initiated)

Technologies: Python, OpenAI API, Streamlit, Embeddings, PSS/E, NLP, HTML, CSS, GitHub Pages, JavaScript

-Personal Portfolio Website

Designed and deployed a responsive website amirexirpe.com to showcase resume, certifications, and AI-powered tools.

Embedded custom GPT-powered assistants for PSS®E automation, ERCOT documentation, and resume Q&A using semantic search and Streamlit.

Integrated interactive project galleries, downloadable credentials, and contact forms for recruiters and collaborators.

-PSS®E Automation Assistant Bot

Developed a Copilot-style assistant that semantically searches through PSS®E code examples to generate Python scripts for automating power system analysis tasks including contingency analysis, dynamic simulation, and model editing.

-ERCOT Protocol, Planning Guide , ERCOT DWG & SSWG and Resource Integration AI Assistant

Built GPT-powered assistants using chunked ERCOT planning guides, protocols, DWG & SSWG manuals, and interconnection processes from ERCOT. Enables semantic search and question-answering for engineers working on compliance, integration, SSWG and DWG working groups and operations.

-Resume & Portfolio Chatbot

Created a personal assistant embedded in my website that answers recruiter and visitor questions about my background, work history, certifications, and project experience using contextual semantic search over a custom-trained dataset.

-End-to-End Embedding & Retrieval Pipeline

Designed a data pipeline to clean, chunk, and embed large technical documents using OpenAI's text-embedding-3-small model. Implemented cosine similarity with token-bounded top-K chunk selection for precise responses.

-Streamlit-Based Interactive UIs

Delivered fast, user-friendly apps using Streamlit for all assistants with embedded system prompts, dynamic chunk context injection, and conversation memory for real-time interaction.

Licenses, Certifications, and skills

- P.E. License (Licensed Professional Engineer) – Texas Board of Professional Engineers #151267
- NERC System Operator Reliability Coordinator Certification- #RC 202105039
- AWS Certified Cloud Practitioner.
- Machine Learning with Python IBM Certification.
- Databases and SQL for Data Science with Python IBM Certification.
- Python for Data Science, AI and Development IBM Certification.
- Data Visualization with Python.
- Familiar with electrical standards and protocols (NEC NFPA, NERC, ERCOT, ANSI, IEEE).

Software

EMS GE Alstom, GE Reliance (PSLF, SE, TSM, DTSPSM, SCADA, RTNET/RTNA, STNET/STNA, RTCA, STCA)

MMS ABB (SCED, COP, RUC)

PSS/E, PSLF, Power World, TARA, DWG True View.

PI, Edna, Seeq, MMAP, Xmap, Gridgeo.

MATLAB, SIMULINK, Python, C++, Linux vi editor.
